Northern Ireland Construction Bulletin

1 July to 30 September 2004

Introduction

The Northern Ireland Construction Bulletin is produced by the Central Survey Unit of the Northern Ireland Statistics and Research Agency, on behalf of the Department of Finance and Personnel.

The Bulletin contains information on the value of Construction Output in Northern Ireland. These figures are derived from the Northern Ireland Quarterly Construction Enquiry (QCE). This is a statutory survey of construction firms operating in Northern Ireland. Each quarter a sample of construction firms are asked to provide details of the value of construction activity they have undertaken in a specified period. The QCE principally produces the Index of Construction, which is an estimate of the volume of construction output. It is an important economic indicator, which contributes to the calculation of UK GDP.

Additional information on the Northern Ireland Construction Industry is also contained in the Bulletin. This information is provided by the Statistics Research Branch of the Department of Enterprise, Trade and Investment and the Health and Safety Executive Northern Ireland (from a variety of survey sources).

Key Findings

The key findings from the QCE covering the period 1 July - 30 September 2004 were as follows:

- The seasonally adjusted Index of Construction was 100.2, down 3 points on the previous quarter (103.2) and down 5.9 points on the corresponding quarter in 2003 (106.1) (Table 1.1)
- The estimated seasonally adjusted value of construction output (at 2000 prices) was £556 million, a decrease of 2.8% (£16 million) on the previous quarter (£572 million) and a decrease of 5.4% on the corresponding quarter in 2003 (£588 million) (Table 1.7)

Source: NI Census of Employment, DEIT, September 2001

NOTES: 1 The Census of Employment is a statutory enquiry of all employers in Northern Ireland, carried out biennially under the Statistics of Trade and Employment (NI) Order 1988.

2 The Census of Employment covers employee jobs only. It excludes: agriculture (but includes animal husbandry service activities and hunting, trapping and game propagation) the self-employed, HM Armed Forces, private domestic servants, homeworkers and trainees without a contract of employment (non-employed status).

3 Persons working 30 hours or less per week are normally regarded as being in part-time employment.

4 The Census of Employment counts the number of jobs rather than the number of persons with jobs. Therefore a person holding both a full-time and a part-time job, or someone with two part-time jobs, will be counted twice.

5 Employees are classified to a Standard Industrial Classification (SIC92) from the business description for each employment unit.

¹ Figures are rounded to the nearest 10 and may not sum due to rounding.

(P) Provisional; (R) Revised

Figures will be updated 16 March 2005.

Notes:

Estimates of the number of employee jobs are obtained from the Quarterly Employment Survey (QES). The QES covers all public sector bodies, all private sector firms with 25 or more employees and a sample of the remainder. The sample size has been chosen in order that estimates of total employee jobs should be accurate to within +/- 1% of the Census of Employment total. The survey collects information on numbers of persons in full-time and part-time employment. It should be noted that the survey counts the number of jobs rather than the number of persons with jobs. For example, a person holding both a full-time job and a part-time job, or someone with two part-time jobs, will be counted twice.

2.4 NORTHERN IRELAND LABOUR FORCE SURVEY Self employed in Construction Industry

Year (Summer)	Number
2004	31,000
2003	30,000
2002	24,000
2001	27,000
2000	22,000

Notes:

Summer quarter comprises June, July and August.

Figures are rounded to the nearest thousand.

Above estimates are subject to sampling error.

Allocation between self employed and employees status is by self assessment.

The above estimates are based on re-weighted LFS estimates, which are in line with 2001

Census of Population results. Revisions to the self-employment series have also taken

place to reflect improvements to the LFS editing procedures, based on the SOC 2000

Occupational Classification, which allow data edits to be removed which previously re-

classified some self-employed as employees.

PBR - payment by results, includes piecework, bonuses, commission and incentive payments (includes profit related pay until 1996).

Premium pay - for shift-work, and for night or week-end work where these are not treated as overtime.

x - data unavailable or suppressed

* Average hourly earnings are calculated by dividing the sum of the weekly earnings of the group of employees by the sum of their total weekly hours.

** To improve coverage, supplementary data was collected for the 2004 ASHE survey on businesses not registered for VAT and for people who changed or started new jobs between sample selection and the survey period. These 2004 results include this supplementary information.

Survey Response for QCE

For the quarter 1 July to 30 September 2004, 84% of contracting firms in the sample participated in the survey. A breakdown of response by stratum is highlighted below. Construction firms are stratified according to annual turnover, ranging from the small stratum one firms with an annual turnover of less than £100,000 through to the large stratum six firms which have an annual turnover in excess of £10 million.

As can be seen from the table, there was a higher co-operation in the survey from larger firms and lower response from firms belonging to stratum 1 and stratum 2. Each quarter, there is ongoing effort to improve overall response.

2004 July- Sept	Stratum	Annual Turnover (£ '000)	Response (%)
	1	0 - 99	53
	2	100 - 499	76
	3	500 - 1,999	89
	4	2,000 - 4,999	84
	5	5,000 - 9,999	89
	6	10,000+	90
	Overall		84

Notes to Editors

1. Statistics derived from the QCE are based on returns made by Construction Firms and Public Sector Direct Labour Departments.
2. The sample of firms in the QCE includes only VAT registered firms in Standard Industrial Classification Division 45 (Construction) on the Inter Departmental Business Register (IDBR).
3. Construction activity measured by QCE includes general construction and demolition work, construction and repair of buildings, civil engineering, installation of fixtures and fittings and any other building completion work.
4. The following definitions are used in the QCE to describe Construction Activity:

New Work is any new construction activity e.g. factory and office extensions, major re-construction, major alterations, site preparation and demolition.

Repair and Maintenance is all on-site work not defined as new construction, e.g. housing conversions, extensions and improvements.

Housing refers to all housing construction activity, both private and public sector.

Infrastructure refers to any work on roads and car parks, water and sewerage, electricity, gas, communications, air transport, railways, harbours and waterways.

Other Work refers to factories, warehouses, oil, steel gas and coal, schools and colleges, offices and banks, shops, universities, entertainment, agriculture, health and welfare, garages and miscellaneous.

5. The base year for all the series published is 2000 (2000 = 100).
6. Tables 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8 (b) are all seasonally adjusted. Seasonal adjustment aids interpretation by removing seasonal variation. The data is seasonally adjusted using X11 ARIMA software.
7. Figures may not always tally due to rounding and seasonal adjustment.
8. Results, particularly for the latest quarter, are provisional and subject to revision as fuller information becomes available.

The time series contained within Chapter 1-Output are updated quarterly to take account of:

- Firms not returning forms on schedule;
- Validation of data;
- Changes to Grossing Factors;
- Changes to the Seasonal Adjusters;

9. The QCE is a sample survey, the results of which are subject to both sampling and non-sampling error.
