Northern Ireland Construction Bulletin Output in the Construction Industry – Q3 2013

The Construction Output Statistics published in the Northern Ireland Construction Bulletin are intended to provide a general measure of quarterly changes in the volume and value of construction output in Northern Ireland. These figures are derived from the Northern Ireland Quarterly Construction Enquiry (QCE). This is a statutory survey of construction firms operating in Northern Ireland. Each quarter a sample of construction firms are asked to provide details of the value of construction activity they have undertaken in a specified period. The survey also includes public sector organisations which carry out their own construction activity.

Data is usually updated quarterly; further information about revisions to previous data is included on page 23 of this bulletin.

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods; and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

Summary of Key Findings - Q3 2013

- The total volume of construction output in Northern Ireland in the third quarter of 2013 increased by 2.4% compared to Q2 2013 but was 2.6% lower compared to the same quarter in 2012.
- The sub-sectors of construction output experienced contrasting growth patterns in Q3 2013. New Work increased by 4.7% but Repair & Maintenance fell by 3.1%. Similarly, Other Work and Housing grew by 8.3% and 1.6% respectively but Infrastructure decreased by 6.2%.
- In Q3 2013, Great Britain experienced a second successive quarter of positive growth with overall construction output increasing by 2.7% compared to the previous quarter.
- In Q3 2013, construction output in Northern Ireland was three-fifths (62%) of the average output reported for 2005. In the same quarter, overall construction output in Great Britain was at 92% of the average output for 2005.

Introduction

This bulletin provides provisional results from the Northern Ireland Quarterly Construction Enquiry (QCE). The Construction Output Statistics published in the Northern Ireland Construction Bulletin are intended to provide a general measure of quarterly changes in the volume and value of construction output in Northern Ireland.

Main uses of Construction Output Statistics

The Construction Output statistics are used by National Accounts in the calculation of the output measure of UK Gross Domestic Product. The results are used by Northern Ireland Government Departments, Economists, Construction Industry Analysts and Academics to understand the state of the construction sector in Northern Ireland.

A summary of the main usage of Northern Ireland Construction Output Statistics is available at: http://www.csu.nisra.gov.uk/QCEdocs/Summary_of_Usage.pdf

Wider Economic Context

The Index of overall Construction (IoC) is also a key economic indicator and one of the earliest short-term measures of the performance of the Northern Ireland economy. In 2010, the construction industry was estimated to account for 7% of regional Gross Value Added (GVA). The latest regional GVA data for Northern Ireland is available at:

http://www.ons.gov.uk/ons/taxonomy/index.html?nscl=Regional+GVA#tab-data-tables

The construction sector in Northern Ireland has been the most severely impacted both in terms of output and jobs since the economic downturn. Construction output peaked in 2007 and was the first sector in Northern Ireland to experience a slow down. Since 2007 the construction sector has experienced a consistent general downward trend in output. The current levels of output are approximately 43% lower than the levels reported in the quarters before the downturn in 2007. Relatively speaking, the Northern Ireland construction sector has also experienced a more severe downturn than the Great Britain construction sector in the last five years.

As well as the impact on output, the downturn in construction has also impacted on the construction sector's labour market with the number of jobs and self-employment well down on peak levels. The latest figures from the Northern Ireland Labour Market Report estimate that the number of employee jobs in the Construction sector in Northern Ireland has fallen by 37% since 2007.

The other employment sectors in Northern Ireland have been relatively less affected in terms of job losses than the construction sector over the same time period. The latest Northern Ireland Labour Market Report is available at:

http://www.detini.gov.uk/index/homepage-stats-surveys.htm

Other key economic indicators measuring the performance of the Northern Ireland economy exist for the Production and Service sectors. The Index of Production (IoP) and the Index of Services (IoS) are derived from separate surveys of businesses in the production and service sectors. The Index of Production and the Index of Services are published quarterly on the same day as the release of the construction output statistics.

More information about the Index of Production and the Index of Services and the latest results for both surveys is available at:

http://www.detini.gov.uk/deti-stats-index/stats-surveys.htm

A new experimental Composite Economic Index covering the whole Northern Ireland economy has been produced by NISRA. The index has been developed using data from existing quarterly indices of output from the Production, Services and Construction sectors. These sources have been combined (on the basis of industry share of Gross Value Added) with Agricultural output data and employee jobs data for the Public sector to provide a seasonally adjusted and deflated measure of change in economic activity. The latest Statistical Bulletin, Press Release and Methodology Paper can be accessed at the following link:

http://www.detini.gov.uk/deti-stats-index.htm

The Department of Enterprise, Trade and Investment's Economic also produces an Economic Commentary which provides an overview of the state of the Northern Ireland economy, setting it in context with the UK and the Republic of Ireland. The latest Economic Commentary is available at:

http://www.detini.gov.uk/deti-stats-index/deti-stats-index-4.htm.

Additional information relating to the construction sector in Northern Ireland

Additional information relating to jobs and accidents in the Northern Ireland Construction Industry is contained in Chapter 2 of this Bulletin. This information is provided by Economic & Labour Market Statistics Research Branch (NISRA, DFP) and the Health and Safety Executive Northern Ireland (from a variety of sources). This information is included at the request of the construction sector in Northern Ireland who wished to have all relevant construction statistics collated in one publication. No additional commentary on these statistics is provided within this publication but more information on these statistics is provided in Chapter Two.

Other relevant background information

The Background Notes on Pages 26-36 of this publication provide detailed information on the methodology used to produce the statistics as well as information on the quality and reliability of the data.

The publication provides various measures of growth (expressed as a percentage) for construction output. The quarter-on-quarter change provides the most recent measure of how construction output is changing. Comparisons are also provided with the same quarter one year earlier.

Tables 1.1-1.6, in Chapter 1, present each construction output series as index numbers. An index number is a convenient form of expressing a series in a way that makes it easier to see changes in that series. The numbers in the series are expressed relatively with one number in that series chosen to be the 'base' (usually expressed as 100) and other numbers being measured relative to that base. For example, a value of 102.4 means that the level of output is 2.4% higher than the base year=100. The Northern Ireland Construction Output series contained in this Bulletin use 2005 as the base year for comparisons.

Indices are created by dividing the current quarter (constant price seasonally adjusted) value of construction output by the average of the base year (2005) and multiplying by 100.

Northern Ireland Construction Output Summary and Commentary

Data is usually updated quarterly; further information about revisions to previous data is included on page 23 of this bulletin.

Overall Construction Output

The total volume of construction output in the third quarter of 2013 increased by 2.4% compared with Q2 2013 but was 2.6% lower compared to the same quarter in 2012 (Figure 1). The volume of construction output in Q3 2013 was estimated to be in the region of 43% lower than the levels of output reported in the quarters before the downturn in 2007.

Figure 1 - Volume of Construction Output in NI
Quarters ending March 2005 to September 2013

Construction Output broken down by New Work and Repair & Maintenance

This section reports on construction output broken down into the classifications of New Work and Repair & Maintenance.

What is included in these categories?

New Work is defined as the construction of any new housing or non-housing structure. It includes output for the public and private sectors covering the housing, infrastructure and the industrial & non-industrial sub-sectors of construction.

Repair & Maintenance concerns work, which is either repairing something which is broken, or maintaining it to an existing standard. For housing output, this includes repairs, maintenance, improvements, house/ flat conversions, extensions, alterations and redecoration on existing housing. For non housing this includes repairs, maintenance and redecoration on existing buildings, which are not housing, such as schools, offices, roads, shops.

Figure 2 shows that in Q3 2013, New Work accounted for 73% of all construction output whilst Repair & Maintenance accounted for the remaining 27% of all construction output.

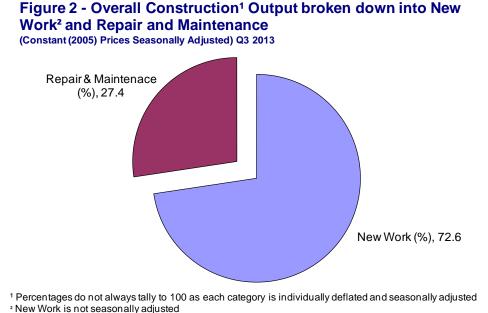

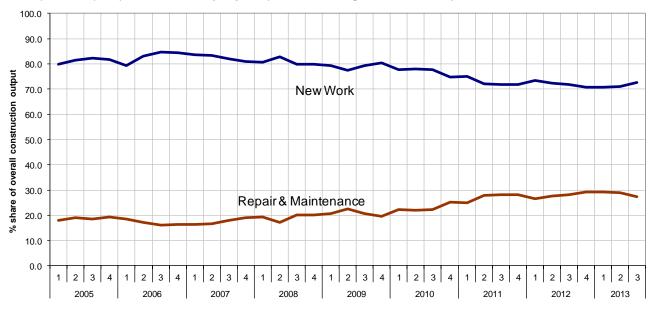

Figure 3 shows that the percentage share of overall construction output between New Work and Repair & Maintenance has converged since 2005, mainly due to the decrease in New Work output.

Figure 3 - Overall Construction¹ Output broken down into New Work² and Repair & Maintenance

(Constant (2005) Prices Seasonally Adjusted) Quarters ending March 2005 to September 2013

¹ Percentages do not always tally to 100 as each category is individually deflated and seasonally adjusted

New Work

In the third quarter of 2013, the volume of New Work increased by 4.7% compared to the previous quarter but was 1.6% lower than the same quarter in 2012. The overall trend in New Work output has been consistently downward since 2007 with current levels of New Work output being approximately half of that reported before the downturn (Figure 4).

Base Line(Index =100)

Figure 4 - Volume of New Work Output in NI Quarters ending March 2005 to September 2013

Repair and Maintenance

In Q3 2013, Repair and Maintenance output decreased by 3.1% compared to the previous quarter and was 5.2% lower than the same quarter in 2012 (Figure 5). This is the second successive quarter of negative growth in the volume of Repair & Maintenance output. However, looking at the general trend since Q1 2005, the volume of Repair & Maintenance output has fluctuated up and down around the baseline but this type of construction activity has not been affected as much compared to the downturn experienced in New Work over the same period.

Construction Output broken down by Housing, Infrastructure and Other Work

There is also interest in looking at construction output by the sub-sectors of Housing, Infrastructure and Other output.

What is included in these categories?

Housing Output is defined as all public and private sector construction activity (New Work and Repair & Maintenance) associated with Housing.

Infrastructure Output is defined as all public and private sector construction activity (New Work and Repair & Maintenance) associated with the following:

- Roads/ Bridges/ Car Parks/ Footpaths
- Water/ Sewerage
- Electricity (power stations and distribution networks, for example, lines and transformers, etc)
- Gas (Gas storage and distribution facilities, pipelines and gasmoeters, etc)
- Communications (television, telephone and radio masts, exchanges, cables and conduits, etc)
- Air Transport (Airports, air traffic control facilities, radar installations, etc)
- Railways, Harbours, Waterways

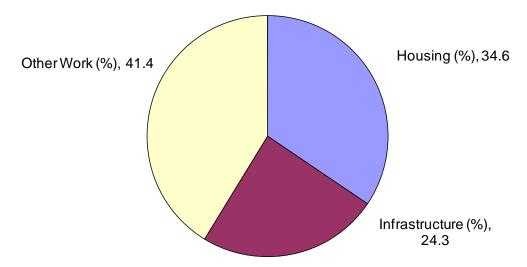

Other Output is defined as all public and private sector construction activity (New Work and Repair & Maintenance) associated with the following:

- Industrial: Factories, Warehouses, Oil, Steel and Coal
- Non-industrial: Schools/ Colleges/ Universities, Hospitals/ Health Centres, Offices/ Banks, Shops/ Garages, Hotels, Clubs/ Cinemas/ Other Entertainments, Churches, Agriculture, Miscellaneous

Figure 6 shows the breakdown of construction output by these sub-sectors of construction for Q3 2013. The largest sub-sector was Other Work which accounted for 41% of all construction output followed by Housing (35%) and Infrastructure (24%).

Figure 6 - Overall Construction¹ Output broken down into Housing, Infrastructure² and Other Work²

(Constant (2005) Prices Seasonally Adjusted) Q3 2013

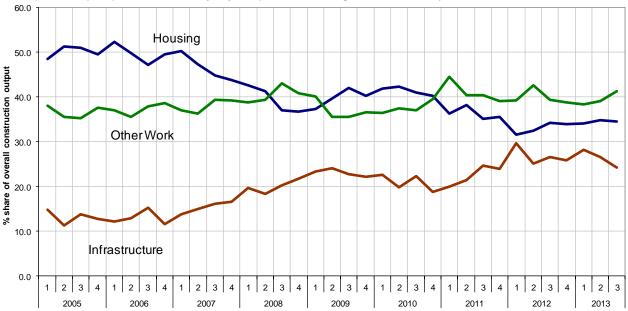

¹ Percentages do not always tally to 100 as each category is individually deflated and seasonally adjusted

² Infrastructure and Other Work are not seasonally adjusted

Figure 7 shows that since Q4 2010 Housing Output has been replaced by Other Work as the largest sub-sector of Construction Output.

Figure 7 - Overall Construction¹ Output broken down into Housing, Infrastructure² and Other Work²

(Constant (2005) Prices, Seasonally Adjusted) Quarters ending March 2005 to September 2013

¹ Percentages do not always tally to 100 as each category is individually deflated and seasonally adjusted

Housing Output

The volume of Housing Output in the third quarter of 2013 increased by 1.6% compared to the previous quarter but was 1.7% lower compared with the same quarter in 2012 (Figure 8). Housing Output has remained at a similar level now for the last six quarters. Looking at the longer trend, the latest volume of Housing Output is in the region of 60% lower than the levels of Housing Output reported in the quarters before the downturn in 2007.

² Infrastructure and Other Work are not seasonally adjusted

Figure 8 - Volume of Housing Output in NI Quarters Ending March 2005 to September 2013

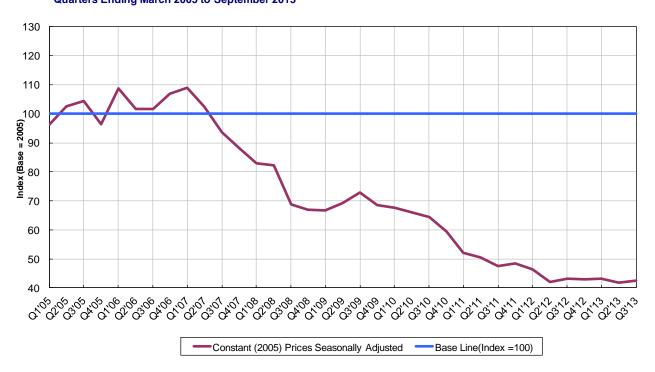

Figure 9 shows that most of the decrease in overall Housing Output is accounted for by the decrease in New Private Housing Output. The volume of New Private Housing Output in Q3 2013 was approximately one quarter of the volume reported in the quarters before the downturn in 2007.

Figure 9 - Housing Output broken down by its sub-components (Constant (2005) Prices, Seasonally Adjusted)

Infrastructure Output

The volume of Infrastructure work in the third quarter of 2013 was 6.2% lower compared to the previous quarter and 10.9% lower compared with the same quarter in 2012 (Figure 10). This is the second successive quarterly decrease in Infrastructure Output. Contrary to the downturn in output experienced in most other construction sub-sectors, the levels of Infrastructure Output including and since 2007 have been variable but consistently higher than the average baseline measure for 2005.

200
180
160
160

100
80
Constant (2005) Prices
Base Line(Index = 100)

Figure 10 - Volume of Infrastructure Output in NI Quarters Ending March 2005 to September 2013

Figure 11 shows that the growth in Infrastructure Output since Q1 2005 has been accounted for by a general increase in New Infrastructure Output and a gradual increase in Infrastructure Output classified as repair and maintenance.

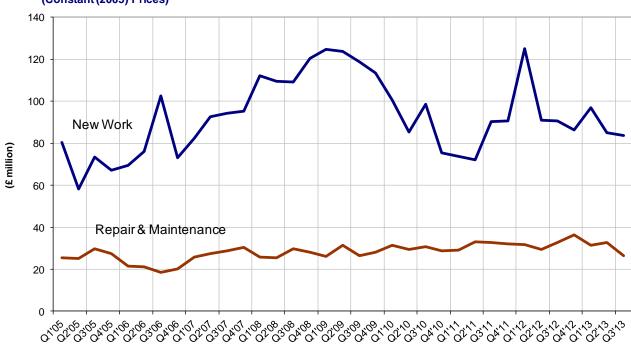

Figure 11 - Infrastructure¹ Output broken down by its sub-components² (Constant (2005) Prices)

Other Work Output

The volume of Other Work Output increased by 8.3% in the third quarter of 2013 compared to the previous quarter and was 2.2% higher compared to Q2 2012. The volume of Other Work output in Q3 2013 was the highest level reported for the last five quarters. Since Q3 2008, the volume of Other Work output has been on a general decline and recent levels of output are approximately one-third less than the average baseline measure for 2005.

¹ Infrastructure is not seasonally adjusted

² No Public/Private split is available for Infrastructure

Figure 12 - Volume of Other Work Output in NI

Quarters Ending March 2005 to September 2013

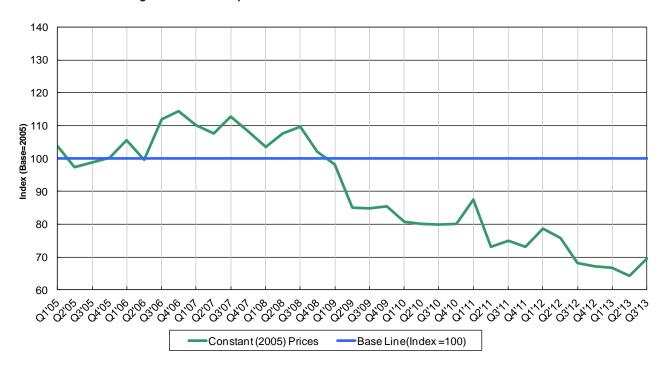

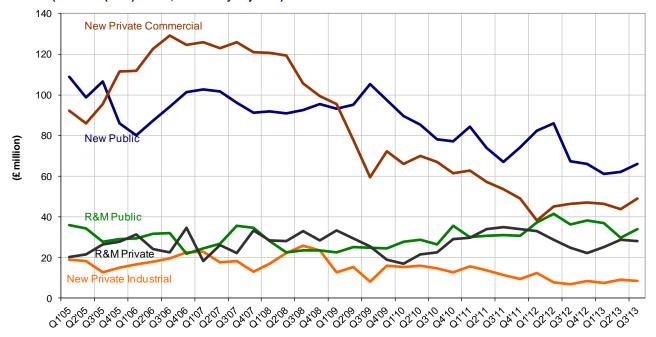

Figure 13 shows Other Work output broken down by its sub-categories. In general terms, New Private Commercial Output is the category which has experienced the largest decline in output levels since the downturn. Since Q2 2009, the volume of New Public Output has also been on a general decline.

Figure 13 - Other Work broken down by its sub-components¹ (Constant (2005) Prices, Seasonally Adjusted)

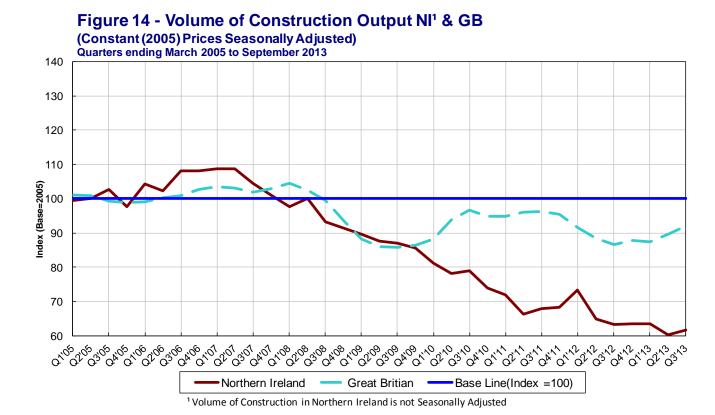

¹ A Commercial/ Industrial breakdown is only available for the New Private area of Other Work

Construction Output in Northern Ireland compared to Great Britain

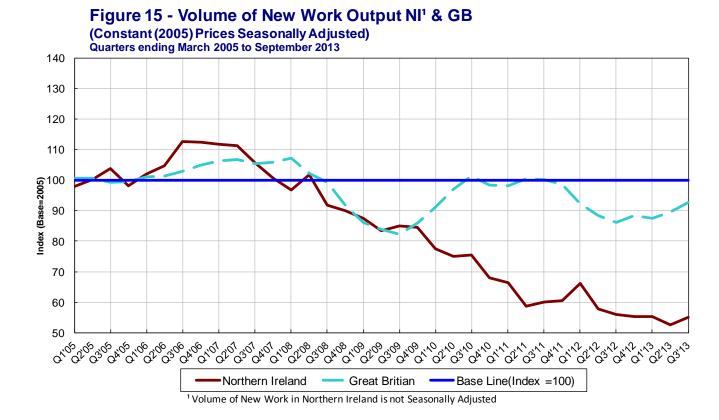

Total Volume of Construction Output - NI & GB

The Index of Construction in Northern Ireland in Q3 2013 was 61.6, an increase of 2.4% compared to Q2 2013. Over the same time period, the Index of Construction in Great Britain was 92.0, an increase of 2.7% on the previous quarter. Relatively speaking the GB construction sector has experienced a less severe downturn than the Northern Ireland construction sector in the last five years (Figure 14).

Total Volume of New Work - NI & GB

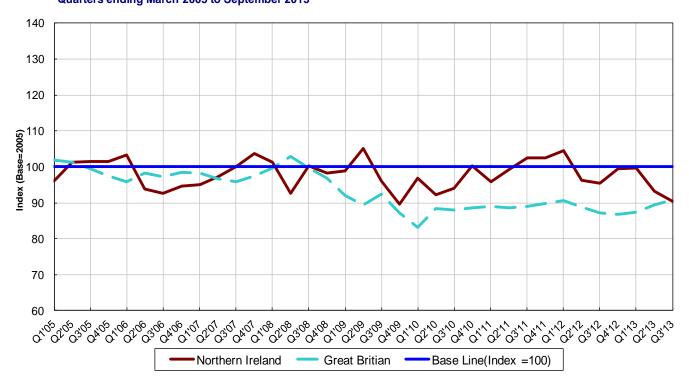

The Index of New Work in Northern Ireland in Q3 2013 was 55.0, an increase of 4.7% compared to Q2 2013. In the same period, the Index of New Work in Great Britain was 92.7, an increase of 3.5% on the previous quarter. The trends in the volume of New Work Output between Northern Ireland and Great Britain in the last five years are similar to those found in overall construction output. Relatively speaking, the Northern Ireland construction sector has experienced a more severe downturn in New Work Output than the GB construction sector (Figure 15).

Total Volume of Repair & Maintenance Output - NI & GB

The Index of Repair & Maintenance in Northern Ireland in Q3 2013 was 90.5, a decrease of 3.1% compared to Q2 2013. Over the same period, the Index of Repair & Maintenance in Great Britain was 90.9, an increase of 1.6% on the previous quarter. In the last five years, GB has experienced more of a downturn in Repair & Maintenance Output compared with Northern Ireland (Figure 16).

Figure 16 - Volume of Repair & Maintenance Output NI & GB (Constant (2005) Prices Seasonally Adjusted)
Quarters ending March 2005 to September 2013

Revisions

In general, revisions to construction output estimates will follow the standard revisions policy shown in the table below.

Frequency and date of revision	Period covered	Reasons
Quarterly	Variable – data can be revised back up to the last four quarters	Late returns; Revised data from firms; Changes to grossing factors;
Quarterly	Variable – full quarterly series	Seasonal adjustment
Quarterly	Variable – full quarterly series	Revisions to Deflators

The table below highlights the latest revisions to previously published estimates of the Index of Construction, Index of New Work and Index of Repair and Maintenance for the last six quarters.

Revisions to previously published figures								
			Ir	ndex 2005=100				
Year / Quarter	Previously Published Index of Construction ¹	Revised Index of Construction ²	Difference ³	Previously Published Index of New Work ¹	Revised Index of New Work ²	Difference ³

Survey Response for Quarter 3 2013

For the quarter 1st July to 30th September 2013, 91% of firms in the sample participated in the survey. A breakdown of valid response by stratum is highlighted below. Firms are stratified according to annual turnover (from IDBR), ranging from the small stratum one firms with an annual turnover of less than £125,000 through to the large stratum six firms which have an annual turnover in excess of £10.5 million.

All Firms

2013 Jul - Sep	Stratum	Annual Turnover (£ '000)	Response (%)
(Quarter3)	1	0 - 124	92
	2	125 - 549	84
	3	550 - 2,099	92

	5	5,250 - 10499	100
	6	10,500+	94
	Overall		91

Quarterly Construction Enquiry Returns (All Firms)

Background Notes

- 1. This statistical bulletin provides information on the output of the construction industry in Northern Ireland. The statistics are derived from the Quarterly Construction Enquiry (QCE). This is a statutory survey of construction firms operating in Northern Ireland. Each quarter a sample of construction firms are asked to provide details of the value of construction activity they have undertaken in a specified period. The survey also covers public sector organisations which carry out their own construction activity.
- 2. The survey measures construction output carried out only in Northern Ireland.
- 3. The sample of construction firms for the QCE is selected from the Northern Ireland extract of the Inter-Departmental Business Register (IDBR). The IDBR includes all businesses registered for VAT and employers with employees in PAYE schemes.

The sample for the QCE covers Sections 41-43 (Construction) of the Standard Industrial Classification 2007 on the Inter Departmental Business Register (IDBR).

- 4. Construction activity measured by QCE includes general construction and demolition work, construction and repair of buildings, civil engineering, installation of fixtures and fittings and any other building completion work.
- 5. The following definitions are used in the QCE to describe Construction Activity:

New Work is any new construction activity e.g. factory and office extensions, major re-construction, major alterations, site preparation and demolition.

Repair and Maintenance is all on-site work not defined as new construction, e.g. housing conversions, extensions and improvements.

Housing refers to all housing construction activity, both private and public sector.

Infrastructure refers to any private or public work on roads and car parks, water and sewerage, electricity, gas, communications, air transport, railways, harbours and waterways.

Other Work includes factories, warehouse, oil, steel, gas and coal, school, colleges, offices, banks, shops, universities, entertainment, agriculture, health, welfare, garages and other miscellaneous projects, covering, both the private and public sectors.

6. Construction Output is defined as the following:

Cost of materials;

Labour costs;

Overheads:

Profits;

Costs associated with demolition and site preparation;

Payments made to subcontractors;

The following is not included as output:

Vat charges;

Payments made to consultants or architects;

In all returns, work done by sub-contractors is excluded to avoid double-counting since sub-contractors are also sampled.

7. A summary of methods used to compile Northern Ireland Construction Output can be found at: http://www.csu.nisra.gov.uk/QCEdocs/QCE%20methods.pdf

Deflation and Seasonal Adjustment

8. It is common for the value of a group of financial transactions to be measured in several time periods. The values measured will include both the change in the volume sold and the effect of the change of prices over that year. Deflators adjust the value series to take out the effect of price changes to give the volume series. Deflation of construction output is carried out sectorally (i.e. New Housing, New Infrastructure etc) using a range of relevant tender price and output price indices supplied by the Office for National Statistics (ONS). Users are advised that these deflators are UK deflators and are not regional NI deflators.

9. Seasonal adjustment aids interpretation by removing seasonal variation due to climate, hours of daylight, holidays or other regular seasonal patterns.

Following a seasonal adjustment review of NI Construction Output statistics carried out by the Office for National Statistics (ONS) in June 2013 a number of the construction output series are no longer considered to be seasonal. The table below shows each series and advises users of the seasonality of the series before and after the review. Figures for those output series which are not seasonal are now presented in constant (2005) prices only.

Outlined Carina	Seasonal -	Yes or No?	
Output Series	Pre-review	Post-review	
All Work (AW)		Yes	No
All New Work (ANW)		Yes	No
All Repair and Maintenance (ARM)		Yes	Yes*
Index of Housing (IH)		Yes	Yes
Index of Infrastructure (II)		No	No
Index of Other Work (IOW)		No	No
New Housing: Private (NHPR)		Yes	Yes
New Housing: Public (NHPU)	ng: Public (NHPU)		No
Other New Work: Infrastructure (ONWI)		No	No
Other New Work: Public (ONWP)		No	Yes
Other New Work: Private Commercial (ONWF	PC)	Yes	Yes*
Other New Work: Private Industrial (ONWPI)		Yes	Yes
Repair and Maintenance – Housing: Private (nd Maintenance – Housing: Private (RMHPR) Yes Yes*		
Repair and Maintenance - Housing: Public (R	nd Maintenance – Housing: Public (RMHPU) Yes Yes*		
Repair and Maintenance - Other Work: Privat	te (RMOWPR)	No	No
Repair and Maintenance - Other Work: Public	(RMOWPU) Yes Yes*		
Repair and Maintenance - Other Work: Road	Yes	Yes	
Key: Yes – Seasonal adjustment required	No – Serie	es is not seasonal (r	no adjustment)
* Series remains seasonal but with a modified mode	l or regressors		

Quality Reporting

10.NISRA has developed a revision triangle for the Northern Ireland Index of Construction. This is designed to help users understand the extent to which estimates are revised over time. The revision triangle presents a summary of the differences between the first estimates of growth published and those published three years later for the same reference period. These differences are tested to see if there is a significant difference between them.

Revisions are considered to be biased if the mean revision is statistically significantly different from zero. A standard t-test and modified t-test are used to compare the calculated bias in the Northern Ireland Index of Construction series (the mean revision) with the variability of the revisions.

Thus far, the differences between the first estimates of growth published and those published 3 years later for the same reference period have been found to be not significant.

Spreadsheets giving revision triangles of estimates for all quarters from Q1 2003 can be found at: http://www.csu.nisra.gov.uk/QCEdocs/revisions-triangle.xls

Users should be aware that the data presented in this bulletin are estimates, subject to both sampling errors (arising from the fact that the QCE is a survey, not a census) and non-sampling errors (for details please see the Summary Quality Report in the next paragraph).

Sampling error is the difference between a population value and an estimate based on a sample. In practice, the standard error is often used as an indicator of sampling error. The standard error gives users an indication of how close the sample estimator is to the population value: the larger the standard error, the less precise the estimator.

The coefficient of variation (CV) is the ratio of the standard error to the estimate, expressed in terms of a percentage. In general terms, the smaller the CV the higher the quality of the estimate.

CVs have been calculated for the main construction output measures (in current prices) and are available at the following link:

http://www.csu.nisra.gov.uk/QCEdocs/CVs.xls

It is difficult to produce standard errors directly for seasonally adjusted series and for volume measures (real prices), but in so far as the standard errors for the unadjusted series are indicators of quality, they will indicate something about the quality of the adjusted series too.

Summary Quality Report

11.A summary quality report for Northern Ireland Construction Output can be found at: http://www.csu.nisra.gov.uk/QCEdocs/QCE%20Quality%20Report.pdf.

It is intended to provide users with information on how the statistics have been compiled and the quality of the information upon which they may be drawing conclusions and making decisions.

Accuracy

- 12. Results, particularly for the most recent quarters, are provisional and subject to revision as later information becomes available.
- 13. Totals may not always tally as each category is individually deflated and seasonally adjusted.

Further Information

14. Similar data for Great Britain Construction Output is provided by the Office for National Statistics at:

http://www.ons.gov.uk/ons/search/index.html?newquery=Building+and+Construction

The GB data is derived from the Monthly Inquiry of Activity for Construction and Allied Trades carried out in GB by ONS. Whilst the QCE and Monthly Inquiry of Activity for Construction and Allied Trades are not identical, much of the sample design and methodology on both surveys are similar. A summary of the main sampling rules and methodology on both surveys can be found in the table on the next page.

	NI Quarterly Construction Enquiry (QCE)	GB Monthly Inquiry of Construction Activity and Allied Trades
Frequency of data collection	Quarterly	Monthly
Sampling frame	IDBR	IDBR
Target Population	businesses classified to construction under Standard Industrial Classification (2007) Section F, Divisions 41-43 (excluding sector 41.1 – Development of Building Projects)	businesses classified to construction under Standard Industrial Classification (2007) Section F, Divisions 41-43 (excluding sector 41.1 – Development of Building Projects)
Sample Design	Sample population is stratified by turnover with businesses with an annual turnover exceeding £5.25 million always being selected	Sample population is stratified by the employment size group and by industry (SIC) of businesses with businesses with 100 or more employees always being selected
Sample size	700	8,000
Include Public Sector DLOs	Yes	No
Definition of Output	Cost of materials; Labour costs; Overheads; Profits; Costs associated with demolition and site preparation; Payments made to subcontractors; The following is not included as output: Vat charges; Payments made to consultants or architects;	Cost of materials; Labour costs; Overheads; Profits; Costs associated with demolition and site preparation; Payments made to subcontractors; The following is not included as output: Vat charges; Payments made to consultants or architects;
Base year	2005	2005
Weighting and Estimation	Returns are weighted by 1. Grossing factors which are computed for each strata derived by dividing the total number of firms in each strata population by the number of firms that returned for that strata.	Returns are weighted using the following: 1. Design weight based on the cell in which a business resides 2. Calibration weight based on register turnover

	NI Quarterly Construction Enquiry (QCE)	GB Monthly Inquiry of Construction Activity and Allied Trades
Deflators	NISRA applies the Output Price Indices (OPIs) described in full in the ONS section on Deflators	ONS receives a deflator for each of the sectors published from the Building Cost Information Service (BCIS) of the Royal Institute of Chartered Surveyors (RICS) on a quarterly basis. (BCIS are currently contracted to provide this information by BIS). The supplied deflators are Tender Price Indices (TPIs). These are converted to Output Price Indices (OPIs) by ONS by applying weights to the received quarterly sector TPIs, based on the typical duration of development for each sector. Although the TPIs are received on a quarterly basis, the calculated OPIs are 'grown' using regression analysis. Once provisional TPIs are received from BCIS, the constant price series is revised and a further revision is applied one quarter later when revised TPIs are confirmed by BCIS.
Seasonal Adjustment Model	X12 - Arima	X12 - Arima

Planned Future Changes

15. The Office for National Statistics (ONS) has signalled its intention to phase out publishing its GB construction output series as a volume (constant) 2005 price based series and will instead be producing and publishing chained volume measures in line with other UK National Accounts areas. ONS also indicated that they would be referencing and rebasing to 2010=100 at the same time. These transitions have now taken place in GB although ONS will continue to make volume (constant) 2005 series estimates available online up to and including Q4 2013. It has been decided that the Northern Ireland Construction Output series should also be published as 2010 chained volume measures (CVM) consistent with GB Construction Output statistics.

In the Q2 2013 Northern Ireland Construction Bulletin, it was announced that we would aim to publish figures for each output series in constant (2005) prices along with newly created chained volume measures in the Q3 2013 Bulletin. It was also announced that with effect from Q4 2013, NI Construction Output would only be published as chained volume measures.

It has not been possible for NISRA to produce the estimates of construction output as chained volume measures in time for this publication. This work is ongoing and we intend to publish these as soon as we can on the NI Construction Output website. Users will be notified when these estimates are available.

We also previously indicated that the deflators which are used to produce the volume (constant) 2005 price series would no longer be available after Q3 2013. ONS has now confirmed that these will now be available up to and including Q4 2013.

Therefore, we have deferred the transition from publishing NI Construction Output statistics only as chained volume measures for a further quarter. The Q4 2013 NI Construction Output statistics will be published in constant (2005) prices along with newly created chained volume measures. With effect from Q1 2014, NI Construction Output statistics will only be published as chained volume measures.

General information on constant price volume series and chained volume measures is provided below.

Constant price (volume) (KP) series

A constant price or volume measure is a series of economic data from successive years expressed in real terms by computing the production volume for each year in the prices of a reference year. The resultant time-series of production figures has the effects of price changes removed (that is, monetary inflation or deflation). In other words, from the raw data a series is obtained which reflects only production volume. The Constant price series in this bulletin are based on the reference year 2005.

Chained volume measures (CVM)

A chained volume series is a series of data from successive years, put in constant price terms by computing the production volume for each year in the prices of the preceding year, and then chain-linking the data together to obtain a time-series of production figures from which the effects of price changes (i.e., monetary inflation or deflation) have been removed. Further information on chain-linking can be found in the methodological article 'Annual chain-linking (58Kb Pdf)'.

http://www.ons.gov.uk/ons/rel/elmr/economic-trends--discontinued-/no--630--may-2006/methodological-note--annual-chain-linking.pdf

The Health and Safety Executive for Northern Ireland (HSENI) which provides the information contained in Tables 2.8.1 - 2.8.6 has advised NISRA that it is no longer able to supply the information required for Tables 2.8.3 - 2.8.5. These tables will therefore be removed in the next bulletin.

The Northern Ireland Construction Output Revision Policy can be found at: http://www.csu.nisra.gov.uk/QCEdocs/revisions-policy.pdf

Publication Policy

- 16. The Northern Ireland Construction Bulletin is available to download free from the website at: http://www.csu.nisra.gov.uk/survey.asp84.htm
- 17. The tables from the current publication, which include data back to 2000, are available in excel format at:

http://www.csu.nisra.gov.uk/QCEdocs/BulletinTables.xls

- 18. The list of people given pre-release access is available at: http://www.nisra.gov.uk/aboutus/default.asp96.htm
- 19. The publication schedule for the next four statistical bulletins is as follows:

Publication Schedule					
2013 Quarter 4	16 April 2014				
2014 Quarter 1	16 July 2014				
2014 Quarter 2	15 October 2014				
2014 Quarter 3	21 January 2015				

National Statistics

20. The United Kingdom Statistics Authority has designated these statistics as

National Statistics, in accordance with the Statistics and Registration Service Act

2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

• meet identified user needs:

• are well explained and readily accessible;

• are produced according to sound methods; and

are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory

requirement that the Code of Practice shall continue to be observed.

More information on 'National Statistics' can be found at:

http://www.statisticsauthority.gov.uk/

A copy of the assessment of the Northern Ireland Construction Output statistics is

available at the following link (182):

http://www.statisticsauthority.gov.uk/assessment/assessment/assessment-

reports/index.html

Chapter 2: The Structure of the Construction Industry in Northern Ireland

Introduction

Chapter 2 'The Structure of the Construction Industry in Northern Ireland' contains information relating to the following:

Type of construction firms operating in Northern Ireland;

Number of people employed in the construction industry in Northern Ireland;

Average earnings in the construction industry in Northern Ireland;

Reported accidents in the construction industry in Northern Ireland;

This information is included at the request of the construction sector in Northern Ireland who wished to have all relevant construction statistics collated in one publication. No additional commentary on these statistics is provided within this publication but information on the sources of these statistics is provided below.

Types of construction firms operating in Northern Ireland – Table 2.1

This information is extracted from the Inter-Departmental Business Register (IDBR). The IDBR is a business register which contains information on all businesses in the UK which are VAT registered or operating a PAYE scheme. The register is located in the Office for National Statistics (ONS) Newport but the NI element of the register is maintained within Economic & Labour Market Statistics Research Branch (NISRA, DFP). All businesses contained on the IDBR are categorised using SIC 2007. This is an international classification system that categorises businesses by the type of economic activity in which they are engaged. SIC (2007) Divisions 41-43 of the IDBR relate to Construction activities.

Table 2.1 provides the number of construction firms operating in Northern Ireland by industry breakdown and turnover based on Divisions 41-43 of the Northern Ireland extract of the IDBR. The figures contained in Table 2.1 are not published elsewhere other than this bulletin. These figures are updated annually in the Q4 Construction Bulletin of each year. **Statistics derived** from the IDBR are classified as National Statistics.

Further information relating to the IDBR is available at the following link: http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-inter-dept-bus-register.htm

Number of people employed in the Construction Industry in Northern Ireland - Tables 2.2-2.4

This information is sourced from the Census of Employment, the Quarterly Employment Survey and the Labour Force Survey.

Table 2.2 provides a full count of the number of employees in the construction industry in Northern Ireland for the latest available year (2009). The source for this information is the Census of Employment which is a statutory survey which has been carried out every two years since 1987. It is a full count of the number of employee jobs in all industries except for agriculture. The self-employed are also not included. Results are available for male, female, full-time and part-time employees up to a five-digit Standard Industrial Classification level. Table 2.2 also provides a breakdown of the number of employees in the construction industry by gender and by construction industry classification. Users should be aware that the industrial classification is based on SIC 2003 which was the appropriate classification to use

The information contained in Table 2.2 is first published by Economic & Labour Market Statistics Research Branch (NISRA, DFP) before it is published in this bulletin. The next update based on the Census of Employment is due to be released in December 2012 (date not specified). Statistics derived from the Census of Employment are classified as National Statistics.

at the time the figures were originally published.

Further information relating to the Census of Employment is available at the following link: http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-census-of-employment.htm

Table 2.3 provides the latest estimate of the number of Northern Ireland Employees in Construction based on the Quarterly Employment Survey. The QES is designed to provide short-term employee job estimates for Northern Ireland in the period between Censuses of Employment.

The QES covers all public sector employers, all private sector employers with 25 or more employees and a representative sample of smaller firms. It provides employee jobs estimates by gender, working pattern (full / part-time) and by Standard Industrial Classification 2007 (SIC07) for Northern Ireland as a whole. Seasonally adjusted figures are also available at broad industry level. This information is collected by Economic & Labour Market Statistics Research Branch (NISRA, DFP).

The information contained in Table 2.3 is first published by Economic & Labour Market Statistics Research Branch (NISRA, DFP) before it is published in this bulletin and the statistics are classified as National Statistics. The statistics are updated quarterly in the NI Construction Bulletin.

Further information relating to the Quarterly Employment Survey is available at the following link: http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-ges.htm

Table 2.4 provides an estimate of the number of self-employed persons in the construction industry in Northern Ireland and is based on estimates from the Labour Force Survey. By definition, the Census of Employment and the Quarterly Employment Survey exclude all self-employed jobs. The information contained in Table 2.4, therefore, supplements the information provided on the number of employee jobs in construction reported in Tables 2.2 and 2.3.

The Labour Force Survey (LFS) is a continuous survey of NI Households. The main purpose of the survey is to provide information on the labour market, including employment, unemployment and economic activity rates. It also covers a range of related topics, such as income, qualifications, training and disability.

The UK is obliged under EC regulations to carry out a Labour Force Survey, using internationally agreed definitions of unemployment, employment and economic activity. Results from the Spring quarter of each year are supplied to Eurostat and can be compared with other EC member states.

The information contained in Table 2.4 is first published in this bulletin. The table is updated quarterly and shows the latest quarterly estimate of the number of self-employed persons in the Northern Ireland Construction Industry together with the annual estimate back to 2001. Statistics derived from the Labour Force Survey are classified as National Statistics.

The findings from the Labour Force Survey are published by Economic & Labour Market Statistics Research Branch (NISRA, DFP) in their Labour Market Statistics Bulletin. Further information relating to Labour Market Statistics is available at the following link:

http://www.detini.gov.uk/deti-stats-index/stats-labour-market.htm

Average Earnings in the Construction Industry in Northern Ireland – Tables 2.5 - 2.7

This information is sourced from the Annual Survey of Hours and Earnings (ASHE) which is a National Statistics survey. The Annual Survey of Hours and Earnings (ASHE) is a UK wide survey that provides information on hourly, weekly and annual earnings by gender, work patterns, industry and occupation, including public versus private sector pay comparisons. The Northern Ireland element of the ASHE survey is carried out by Economic & Labour Market Statistics Research Branch (NISRA, DFP).

The statistics contained in Tables 2.5-2.7 are first published in this bulletin. The figures contained in tables 2.5-2.7 are updated annually in the Q3 Construction Bulletin of each year.

Further information relating to ASHE is available at the following link: http://www.detini.gov.uk/deti-stats-index/stats-surveys/stats-hours-and-earnings.htm

Reported Accidents in the Construction Industry in Northern Ireland – Tables 2.8.1 – 2.8.6

This information is sourced from the Case Management System (CMS) of the Health and Safety Executive for Northern Ireland (HSENI). The information comes from incident reports submitted to HSENI under the RIDDOR regulations.

The statistics contained in Tables 2.8.1-2.8.6 are first published in this bulletin and are updated annually. *These statistics are classified as 'Official Statistics'*.

Further information is available at www.hseni.gov.uk.

Table 2.1 Structure of the Construction Industry
The table below shows the number of businesses that are either registered for VAT with HM Customs and Excise or which operate a PAYE scheme with the Inland Revenue, at September 2013

Source: NI Census of Employment, DEII, September 2011

NOTES: 1 The Census of Employment is a statutory enquiry of all employers in Northern Ireland, carried out biennially under the Statistics of Trade and Employment (NI) Order 1988.

² The Census of Employment covers employee jobs only. It excludes: agriculture (but includes animal husbandry service activities and hunting, trapping and game propagation) the self-employed, HM Armed Forces, private domestic servants, homeworkers and trainees without a contract of employment (non-employed status).

³ Persons working 30 hours or less per week are normally regarded as being in part-time employment.

⁴ The Census of Employment counts the number of jobs rather than the number of persons with jobs. Therefore a person holding both a full-time and a part-time job, or someone with two part-time jobs, will be counted twice.

⁵ Employees are classified to a Standard Industrial Classification (SIC07) from the business description for each employment unit.

Source: Quarterly Employment Survey (QES), NISRA

For more details on these changes and their impact please see $\frac{http://w\ w\ w\ .detini.gov.uk/deti-stats-index/stats-surveys/stats-qes/stats-qes-discontinuity-notice.htm}$

Estimates of the number of employee jobs are obtained from the Quarterly Employment Survey (QES). The QES covers all public sector bodies, all private sector firms with 25 or more employees and a sample of the remainder. The sample size has been chosen in order that estimates of total employee jobs should be accurate to within +/-1% of the Census of Employment total. The survey collects information on numbers of persons in full-time and part-time employment. It should be noted that the survey counts the number of jobs rather than the number of persons with jobs. For example, a person holding both a full-time job and a part-time job, or someone with two part-time jobs, will be counted twice.

¹ Figures are rounded to the nearest 10 and may not sum due to rounding.

² Important Notice: Users of QES data should be aware that the sample coverage used to derive employee jobs estimates in NI has been extended. This has resulted in a discontinuity in the QES employee jobs series from the reference period Q3 2009 onwards.

Table 2.4 Northern Ireland Labour Force Survey Self employed in Construction Industry

Year (Quarter 2)	Number
2013 Q3	26,000
2012	23,000
2011	24,000
2010	27,000
2009	30,000
2008	33,000
2007	31,000
2006	30,000
2005	32,000
2004	34,000
2003	29,000
2002	25,000
2001	25,000

Notes:

Figures are rounded to the nearest thousand.

Above estimates are subject to sampling error.

Allocation between self employed and employees status is by self assessment.

From 2010, the above estimates are based on re-weighted LFS estimates, which are in line with the 2011 mid-year population estimates.

From 2002, the above estimates are based on re-weighted LFS estimates, which are in line with the 2010 mid-year population estimates.

Prior to 2002, the above estimates are based on weighted LFS estimates, which are in line with the 2007 mid-year population estimates.

Figures from 2001 onwards are based on Q2 (Apr-June) each year.

Figures from 2009 onwards are based on SIC2007.

PBR - payment by results, includes piecework, bonuses, commission and incentive payments (includes profit related pay until 1996).

Premium pay - for shift-work, and for night or week-end work where these are not treated as overtime.

x - data unavailable or suppressed

^{*} Average hourly earnings are calculated by dividing the sum of the weekly earnings of the group of employees

SOC - Standard Occupational Classification 2000/2010

¹ To improve coverage, supplementary data was collected for the 2004 and subsequent ASHE surveys for people who changed or started new jobs between sample selection and the survey period. The ASHE results since 2004 are therefore discontinuous with earlier results.

 $^{^2}$ For the 2006 ASHE results, ONS also introduced a small number of methodological changes. The ASHE results since 2006 are therefore discontinuous with earlier results.

³ For 2009 ASHE results, ONS moved from using the SIC 2003 Industrial Classifications to using the SIC 2007 Industrial Classifications. The ASHE results since 2009 are therefore discontinuous with earlier results.

⁴ For 2011 ASHE results, ONS moved from using the SOC 2000 Occupational Classifications to using the SOC 2010 Occupational Classifications. The ASHE results since 2011 are therefore discontinuous with earlier results.

		Roofer	Employed	Fell approx.12.3m from a roof	15/03/2005
		Road Worker	Self-employed	Knocked over by a reversing lorry	22/03/2005
		In (le .	Ten en con	1 00/05/0005
		Roofer	Employee	Fell approx. 5m through a roof light onto concrete floor	30/05/2005
		Fitter	Employee	Died in explosion at water treatment works whilst carrying out construction maintenance work	06/02/2006
2005/06	5	Farmer	Self-employed	Fell from roof (5m) through Perspex	13/10/2005 (Died
	1			skylight on corrugated farm shed	14/10/2005
		Painter/ decorator	Employee	Fell from ladder whilst painting facia at eves of house	12/06/2005
		Road Worker	Self-employed	Electrocuted when an articulated lorry made contact with an overhead powerline	28/02/2006

2.8.6.	Constructi	ion sector – des	scription of fa	atal accidents (continued)	
Year	Number of Fatalities	Occupation	Employment Category	Description	Date
	6	Maintenance	Employee	Fell from roof into well at Stewart Hall, Stewartstown	01/05/2006
		Construction Worker	Employee	Buried when a trench collapsed on top of him at construction site, Ballywalter Road, Millisle	08/052006
2006/07		Digger driver	Self-employed	A 9" wall collapsed on him during ground work on a farmyard near Limavady.	27/07/2006
		Joiner	Employee	Mobile building collapsed on top of IP when it was being moved at RAF Aldergrove.	19/09/2006
		Telescopic Handler Driver	Employee	Drowned in tank at construction of new pumping station in Portrush.	06/10/2006
		Engineer		Electrocuted when drilling rig made contact with overhead power line.	31/01/2007
	5	Grab Driver	Employed	Struck by lorry while standing beside his vehicle	02/05/2007
		Builder*	Self Employed	Fell from scaffolding at a site in Dunmurry	11/08/2007 (Died 18/08/2007)
2007/08		Builder*	Self Employed	Fell from garage roof at a house under construction in Ballynahinch	12/09/2007
		General Labourer	Employed	Died from injuries received when struck by collapsing gable wall in Fintona	25/01/2008
		General Labourer	Employed	Struck by reversing vehicle on site in Belfast	27/02/2008
2008/09	2	Plant Operator	Employed	Died when dumper he was driving went off the edge of steep earth ramp	09/05/2008
		General Labourer	Employed	Died from injuries sustained after fall from height on construction site	11/12/2008 (Died 26/12/2008)
2009/10	1	General Operative	Employed	Fell from ladder whilst assisting in repair of roof tiles. Possible seizure/fit	09/07/2009
2010/11	1	Partner	Self Employed	IP fell onto a concrete floor as he was attempting to strip the original roof in preparation for the new roof sheeting	05/06/2010 (Died 19/6/2010)
2011/12	2 2	Painter/Decorator	Partner in family decorating business	Fell from a ladder - Doagh	20/06/2011
		Building Contractor	Self Employed	Died from head injuries after he was struck by low loader he was repairing - Rasharkin	31/12/2011
2012/13	1	Partner in Firm	Self Employed	Died as a result of head injuries sustained when he was struck by a steel plate. Coleraine.	13/09/2012
